Volvo Cars Internship | Work reference | Nikola Radic

Nikola completed a five-month internship within our **VCT Site DevOps team** at **Volvo Cars**, during which he became an active and highly appreciated member of the group. From the very beginning, he demonstrated professionalism, curiosity, and a strong drive to learn, allowing him to contribute meaningfully across many aspects of our daily operations.

Throughout his internship, Nikola worked with a wide range of tools and technologies that form the foundation of our Site DevOps responsibilities. His work involved:

- **Azure DevOps** – pipelines, boards, repositories
- **Git** – version control and collaboration
- **Java Spring Boot, Angular, JavaScript** – coding tasks, bug fixes, and implementation of new features
- **OpenShift (Kubernetes)** – deployments, troubleshooting, and environment work
- **OpenVMS, Oracle Database, SQL**

He actively contributed to our development and operational workflows, including code development, deployments, debugging, and the implementation of new features. In addition, Nikola participated in our daily operational duties such as incident handling, problem and change management, and routine deployments. His ability to handle these tasks with growing independence showcased both his technical progression and his reliability.

Nikola is an ambitious and motivated junior developer, eager to expand his knowledge and continuously improve. His willingness to take on challenges and push himself forward was evident throughout his internship.

He also proved to be a strong team player - collaborative, supportive, and always willing to contribute for the benefit of the team.

His positive attitude, openness, and excellent communication skills made him easy to work with and allowed him to fit seamlessly into the team. He consistently demonstrated strong work ethics and built good camaraderie with his colleagues.

We consider Nikola a promising junior developer with a bright future ahead of him.

BR,
Andreas Rosenqvist
