COMPETENCE

- HTML
- CSS
- Java (Spring Boot)
- TypeScript / JavaScript
- C# / .NET
- CI/CD pipelines (Azure DevOps Pipelines)
- Angular & React, Aurelia
- DevOps (OpenShift, OpenVMS, pipelines & deployment)
- SQL (SQL Developer, MS SQL)
- Version control systems (Git)
- Cloud & container platforms (Azure, OpenShift)
- ITIL-based Incident, Problem & Change Management
- Agile & Scrum

LANGUAGES

- Swedish
- English
- Serbian
- Macedonian

NIKOLA RADIC

My name is Nikola Radic, and I began my journey as a .NET web developer. Over time, I grew into the role of a Software Engineer, a role I truly enjoy and feel at home in. I have always been a curious and driven person with a growth-focused mindset, and I strongly believe that you improve by practicing consistently and challenging yourself.

During my time at Volvo Cars, I became part of the VCT DevOps team, where I expanded my skill set and moved from a pure .NET developer into the role of a Software Engineer. I worked close to production and used technologies such as Java Spring Boot, Angular, TypeScript, SQL Developer, Swagger UI, OpenShift, and Azure DevOps.

In my internship at Hogia Business Products, where I worked on digital invoice flows and approval processes using technologies such as TypeScript, Aurelia, React, Azure DevOps, and C#, I gained a solid foundation and the opportunity to work on real projects alongside experienced developers.

WORK EXPERIENCE

May 2025 - Dec 2025

Volvo Cars - VCT Site DevOps Team GOTHENBURG

Worked with global MES systems across both development and operational responsibilities. Supported production stability through Incident, Problem and Change Management and resolved issues affecting daily operations. Worked with Java-based global production integration flows, including troubleshooting transactional issues, fixing defects, analyzing end-to-end message behavior, implementing code changes and updating configuration data. Delivered key development tasks for the launch of the XC60 in Charleston and contributed to the decommissioning of legacy systems at VCT, including work related to the V60 Ghent flow.

Key contributions:

- Enabled a new direct integration flow as part of the legacy system decommissioning, ensuring correct handling of new message formats and supporting the launch flow for XC60 Charleston and existing flows for V60 Ghent.
- Improved the Castle “Historical data at reg.point” calendar UI by replacing outdated components, resolving styling issues, and preparing a full test plan to secure correct behavior and user feedback.
- Resolved multiple defects and operational issues, contributing to higher system reliability and smoother production support.

Worked with CI/CD pipelines, deployments and rollbacks in OpenVMS and OpenShift, and technologies such as Java Spring Boot, Angular, TypeScript, SQL Developer, Swagger UI and Azure DevOps.

Nov 2023 - May 2024

Internship - Hogia AB - Business Products STENUNGSUND

Worked in the development team for Approvelt and OpenBusiness, contributing to functionality for digital invoice flows and approval processes. Delivered UI and feature improvements to production using TypeScript, Aurelia, React, and C#, with Git and Azure DevOps in an agile environment.
